DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the element of "positive/negative change timing detection means" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

2. Claims 14-22 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:
Present application discloses a synchronization establishment apparatus for establishing synchronization comprising a positive/negative change timing detection means, synchronization establishing means, A/D converter, phase detection circuit, an offset level generation circuit, a first adder, an unwrap circuit, a second adder, a filter circuit, polarity bit converter, change point extraction circuit, change point measurement circuit, clock synchronization establishment circuit, and a timing generation circuit configured and illustrated as shown in Fig.4. Prior art, Nakamura and Ejzak teach in the same field of endeavor, but do not explicitly teach the combination of the elements recited and configured as shown in the figure.

Conclusion

4. This application is in condition for allowance except for the following formal matters:

Drawings.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
